ABSTRACT

A method for pruning and grooming DVD content into a format compatible to be viewed over a network is disclosed. The method provides for automated DVD conversion. The method provides for removing and editing DVD content that is not desirable to be delivered over the network and adding and editing additional content that is desirable to be delivered over the network. The method provides for navigational enhancement that provide: tie-ins to on demand portals; key-mapping; button highlighting; intra-menu navigation; inter-menu navigation and DVD disc merge capability.
